

Abalone

Haliotis species

200 mm

Most common are the greenlip and blacklip. Abalone are distinguished by a large ear-shaped shell with a series of respiratory holes. No operculum.
Survey code: Ab

Black nerite

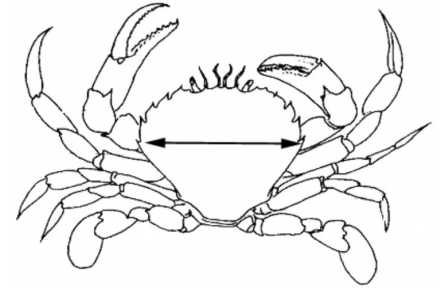

Nerita atramentosa

28 mm

Black shell, white apex and white margin around aperture. Occurs in high abundances in upper intertidal zone, usually clustered under boulders.
Survey code: Na

Crab — *Ozius truncatus*

Measure a crab across the widest part of the carapace. This crab grows up to 100 mm across the carapace.

Solid, slow-moving crab. Occurs commonly under rocks at lower tidal levels. Dark grey-brown carapace with margin that is relatively straight between the eyes. Large, black-tipped claws often uneven in size.

Survey code: Cr
